## ARTEMARMI GROUP

### ARTEMARMI

A trusted partner for professionals across various fields of architectural design, including residential, public works, hospitality, marine, urban furniture and interior design. With a highly qualified and experienced team, our company provides designers with expert advice on material procurement and selection, offering assistance with the most technical aspects of executive planning and throughout all pre-production phases. Artemarmi serves as a single point of contact, ensuring support throughout the entire supply and installation process.

### LORENZINI

Experts in the sale of travertine blocks and slabs for both the domestic and international markets.

### PARADISI

A historic company known for combining artisanal craftsmanship with advanced technology.

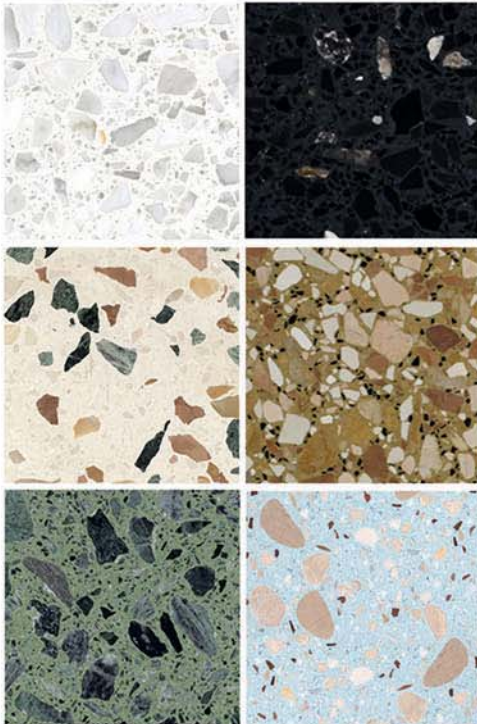

## MATERIALS

### NATURAL STONE

Marble, granite, travertine, onyx and slate from around the world, meticulously selected to meet the specific technical and aesthetic needs of each architectural project.

### AGGLOTECH

High-performance natural agglomerates made from marble chips and 52.5 R white Portland cement, cast in blocks, which are then seasoned and sawn using multi-blade frames. The availability of both slabs and solid blocks makes this highly versatile product suitable for various applications, from flooring and cladding to solid furnishings.

Partner company **AGGLOTECH**  
ARCHITECTURAL TERRAZZO

### STONEWARE

Large-format, ultra-thin ceramic slabs that defy traditional use, making them ideal for exterior architecture, interior design, and home furnishings.

Partner companies  
**LAMINAM** **FLORIM**  
**ABKSTONE** **MATERIA**

### QUARTZ - RESIN

A composite material made by blending quartzite with resin, enriched with granite and marble powders, glass granules, and various pigments to create countless varieties of slabs. Quartz resin is perfect for kitchen and bathroom counter tops, as well as for flooring and wall cladding.

## CONTINUOUS FLOORING

**VENEZIANA:** flooring characterised by specifically selected marble grit size and colour combinations, creating a distinct aesthetic. Particular care is taken in selecting sustainable materials with strong ties to the local area.

## RAISED

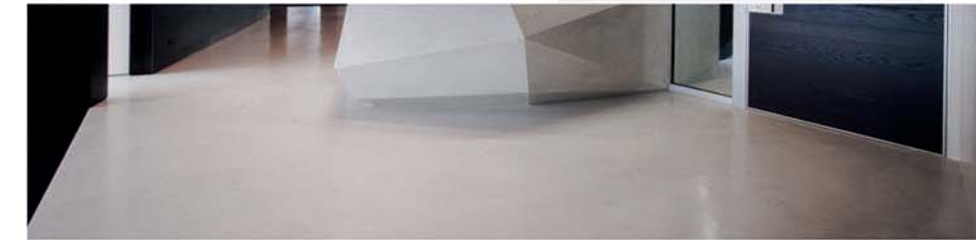

Designed to meet the demand for adaptable solutions in workplaces and retail spaces, and widely used for terrace flooring, these systems feature point-supported structures that elevate the walking surface, creating space for technical systems below.

## BACKLIT

Backlighting is a high-impact use of natural stone, leveraging its translucency — especially that of onyx — with the placement of light sources behind the material to create stunning effects.

## PRODUCTS

**MICROCEMENT:** ideal for those seeking a continuous, textured finish, with a thickness of just 3 millimetres. Microcement allows for the renovation of various existing surfaces — such as concrete, ceramic or wood — with no need to removal.

## LIGHTENED

The demand for large yet lightweight stone slabs has led to the development of panels made from thin natural stone sheets (minimum 5 mm thick), bonded to honeycomb panels with epoxy adhesives.

## WATERJET CUTTING

Waterjet marble cutting is a precision technology that offers endless design possibilities, enabling the creation of inlays, furniture elements and precision cuts for general applications. Perfect for delivering top-quality architectural results.

## SERVICES

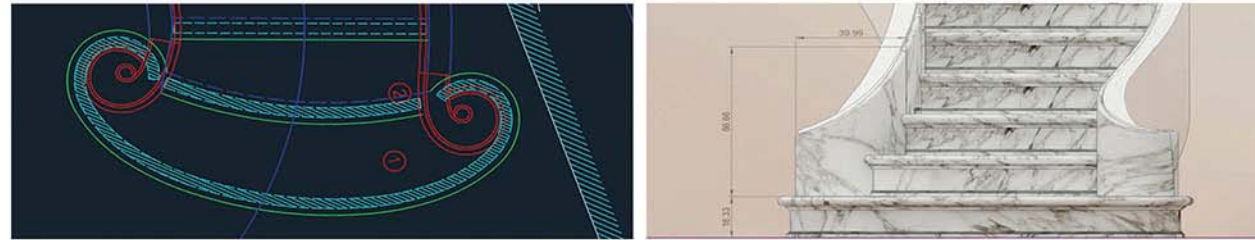

### SURVEYING

We use the most suitable tools for each project, from manual laser measurement to 3D Laser Scanning for more complex architectural structures.

### DESIGN - ENGINEERING

We carry out every project using CAD digital design and 3D modelling technologies. In particular, we develop: Technical drawings for the determination of the formats. Three-dimensional models for analysing and engineering complex elements. Installation diagrams showing the code and position of each furnished component to ensure proper placement.

### PRE-LAYING AND PACKAGING

At the end of production, we perform a dry layout of the finished elements to verify the precision of the cuts and joints. We then catalogue and number all the components, and package them in crates designed to meet the transportation and work site storage requirements.

### INSTALLATION

Our team of highly skilled installers is supported by our technical department throughout each stage of the on-site installation process.

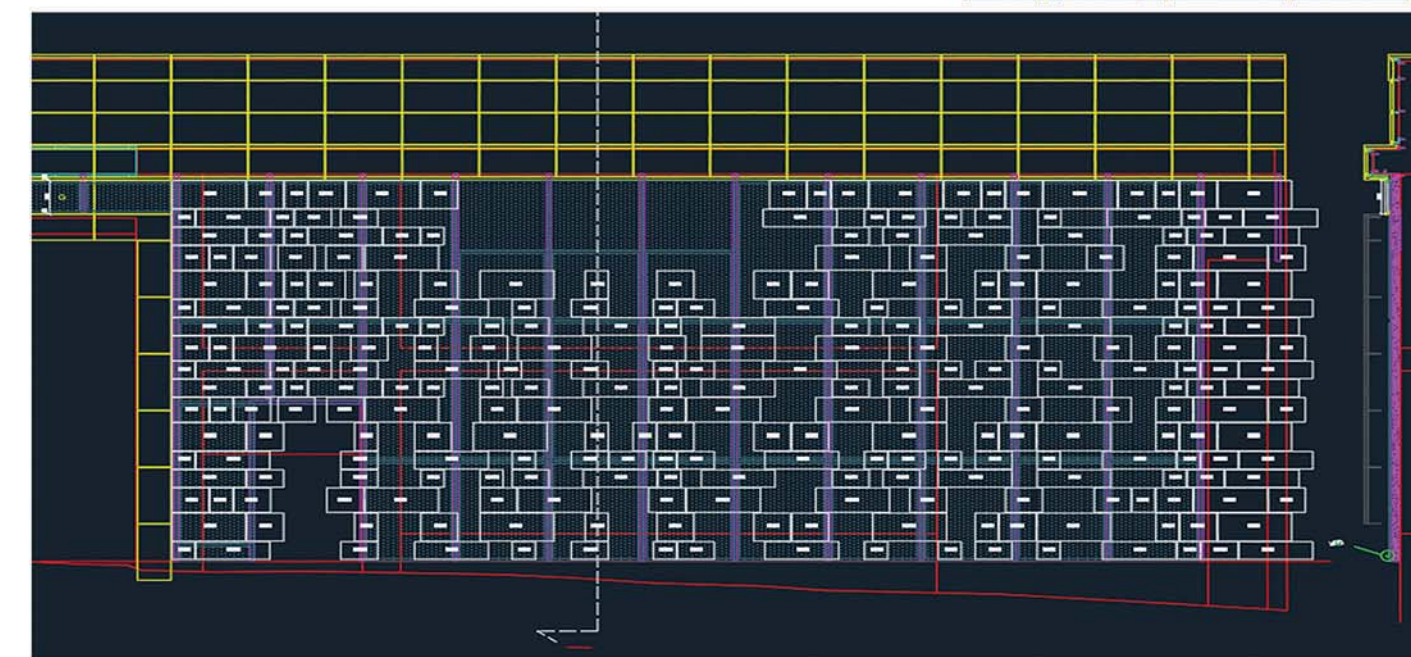

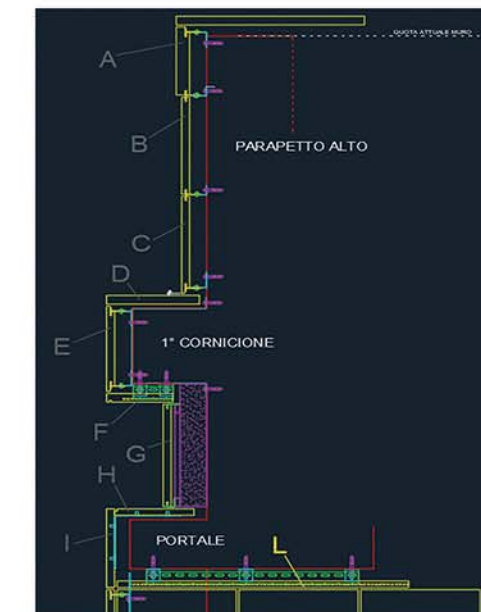

## CLADDING AND FAÇADES

With extensive experience in the sector of cladding and ventilated façades, we offer:

- technical consulting for designers on installation systems and the stone materials most suitable for the specific façade;
- support in designing substructures and anchoring systems;
- verification of slab formats based on the chosen material and development of installation templates;
- supply of marble, stone and granite slabs, complete with kerfs or accessories for installation;
- coordination and support with specialised installers for the installation of ventilated façades.
